Environmental Health and Safety Policy Statement - Guiding Values

Our business success is not just the result of high-quality products. It is just as much based on an above-average effort when it comes to the environment and workplace safety. Our management and all employees are fully committed to keep to relevant laws and regulations regarding environmental protection and occupational safety.

From the development of our products and processes through production and distribution, we adhere to these goals consistently. The company provides the necessary personal and monetary resources. In a modern infrastructure, VAT has highly effective, environmentally friendly and safe manufacturing facilities.

We as VAT Group AG are strongly committed to conducting sustainable development on society, environment and society.

Please note: We are ISO 9001:2015 and 14001:2015 certified.

As you can see on our company web-side.

Environmental Health and Safety Policy Statement - Guiding Principles

We are aware that our success is to a large extent based on the trust which the public, our shareholders, customers and suppliers have in us. We justify this trust when we fully adhere to regional, national and global laws and regulations.

We increase the environmental and safety skills and knowledge of our employees with optimal working conditions in a process of continuous improvement. All employees with VAT have the necessary protective equipment and get regular training updates for their responsibilities related to environmental protection and workplace safety.

We give preference to suppliers who act according to environmental and safety principles. VAT purchases only products and services which meet the legitimate environmental and safety expectations.

We procure and operate equipment and production facilities which meet the statutory requirements as regards environmental protection and occupational safety. They must rank among the best in their use of resources (e.g. energy consumption, space, emissions etc.).
